Updated Volumes and Contaminant None at the time of this update

Date: 10/10/2017 **Status:** Inspection

No Further Action:

Author: DeVries, Taylor

Notes:

Inspection Date: 10/10/2017

Arrived on location at 1700. This well pad is a part of a series of well pads that are in a gated oilfield community. The gate code for all of these gates is in the incident folder. The release was no longer there when I arrived. The Conoco Phillips representative had told me the release was an emulsion leak from the well head that had drained to the culvert inside the berm. The area where the release occurred off pad was dug up and removed. There was erosion control in place due to the Badland terrain. Photos were taken and can be found in the incident folder. No further action recommended at this time.
