Date: 3/16/2018 Status: Inspection No Further Action: ✓

Author: Martin, Russell

Notes:

3/13/2018 at 14:25, on location. Met with site personnel and confirmed fire stayed onsite. According to site personnel, it is believed salt water moving through one of the produced water tanks built up an electrical charge causing a lightning strike during the snow storm that occurred over the 4th. Burnt tank still onsite, the fiberglass tank burnt/melted down to about half its height. Offsite, grass is snow covered, no evidence of having been burned. No further follow-up required at this time.

Updated Volumes and Contaminant None at the time of this update
