Updates

Date: 3/5/2019 **Status:** Reviewed - Follow-up Required

No Further Action:

Author: Crowdus, Kory

Notes:

Release impacted areas off location. Follow-up is required.

Updated Volumes and Contaminant None at the time of this update

Date: 3/13/2019 **Status:** Inspection

No Further Action:

Author: Martin, Russell

Notes:

3/6/2019 at 12:48, on location. Met with personnel from cleanup company, who were scraping up impacted snow. Fluid misted out of flare to the east/southeast off location. Cleanup personnel almost finished, impacted snow around flare pit has been scraped up, remaining stained snow further away currently being removed. Some discoloration further to the southeast appears to be dust from the nearby lease road to the north, cleanup personnel confirmed this as they are also the personnel that sand and plow the road. Based on minimal amount remaining, no further follow-up required at this time.

Updated Volumes and Contaminant None at the time of this update
