Affected Medium: Topsoil

General Land Use: Pasture

Near. Occupied Bldg:

Nearest Water Well:

Type of Incident: Pipeline Leak

Release Contained: No

Reported to NRC: No

	Spilled	Units	Recovered	Units	Followup	Units
Oil	1.3	Barrels			1.3	barrels
Brine	0.7	Barrels			0.7	barrels

Other

Oth Rel. Contaminant:

Date Inspected:

Clean Up Concluded: 8/16/2019

Written Report Recd: 6/11/2020

Risk Evaluation:

N/A

Areal Extent:

20' x 80' area of adjacent hay field was misted.

Potential Env. Impacts:

Topsoil & vegetation

Action Taken/Planned:

Flowline was isolated and sucked down. All impacted material will be removed and replaced with clean fill/topsoil. Line will be repaired or replaced.

Wastes Disposal Location:

Little Missouri Special

Other Agencies Involved:

NDDH

Updates

Date: 8/14/2019 **Status:** Reviewed - Follow-up Required **No Further Action:**

Author: Stockdill, Scott

Notes:

According to the incident summary, this spill impacted the surrounding area. More follow-up is necessary.

Updated Volumes and Contaminant None at the time of this update

Date: 8/14/2019 **Status:** Inspection **No Further Action:**

Author: O'Gorman, Brian

Notes:

Arrived on location at 16:37. 82 degrees F, Sunny, Southeast wind 5-10 mph. Observed the location and took photos. It appeared that most of the release had remained on the well pad due to the release location and slope of the pad. The pipeline leak was in the south-center portion of the pad and had been scraped up and removed. It appeared that any impacts off the pad would have been to the northeast corner of the pad. Alfalfa field surrounded the pad. Follow-up needed to determine if impacts were contained on the well pad. Photos added to the incident folder.

Updated Volumes and Contaminant None at the time of this update

Date: 8/23/2019 **Status:** Inspection - Vegetation Check **No Further Action:**

Author: Suess, Bill

Notes:

I visited the site on 8/22/2019. The well pad had been scraped and new scoria applied. A 25 foot wide swath the length of the east side of well pad (approximately 90 feet) had also been scraped. There were no signs of oil staining and the EC readings were consistent with background. The site should be revisited in the spring of 2020 to verify revegetation.

Updated Volumes and Contaminant None at the time of this update

Date: 5/21/2020 **Status:** Inspection - No Action Required **No Further Action:**

Author: Suess, Bill

Notes:

Visited the site on 5/19/2020. No adverse impacts associated with this incident were observed. The vegetation looks healthy and consistent with the surrounding area. No further action is warranted.
