Affected Medium: Topsoil

General Land Use: Other - Described Above

Near. Occupied Bldg: 1 Mile

Nearest Water Well: 1 Mile

Type of Incident: Pipeline Leak

Release Contained: No

Reported to NRC: No

	Spilled	Units	Recovered	Units	Followup	Units
Oil						
Brine						
Other	0.5	Barrels				

Oth Rel. Contaminant: Apparent pipeline leak of emulsion. Approximately 1/2 bbl seen on the surface. Any below surface impacts will be assessed at the time of remediation.

Date Inspected:

Clean Up Concluded:

Written Report Recd:

Risk Evaluation:

Impacts to area soil and vegetation.

Areal Extent:

The surface impacts appear to be approximately 20ft X 30ft.

Potential Env. Impacts:

Impacts to area soil and vegetation.

Action Taken/Planned:

The pipeline had been shut in previous to the discovery of the spill. On 09.06.19 residual fluids from the pipeline were pumped out via a vac truck and a berm was placed around the area of impact to control run-on and run-off. On 09.06.19 NDIC, DEQ, and Williams county Emergency Management responded. Notification and information was shared verbally to those agencies on 09.06.19 onsite and

via phone call(s). Site assessment and remediation is being planned.

Wastes Disposal Location:

An approved waste disposal facility.

Updates

Date: 9/6/2019 **Status:** Inspection **No Further Action:**

Author: DeVries, Taylor

Notes:

Inspection Date: 9/6/2019

Arrived on location at 1530. Met with multiple Hess representatives and toured the release location. There were two puddles of crude oil within the grass. A one call was ordered and soil removal was scheduled for Monday. The forecast for the weekend predicted rain so an earthen berm was built around the two puddles to ensure no migration.

Further follow-up is needed next week.

Photos were taken and can be found in the report folder.

Updated Volumes and Contaminant None at the time of this update

Date: 9/9/2019 **Status:** Reviewed - Follow-up Required **No Further Action:**

Author: DeVries, Taylor

Notes:

According to the incident report there was a release from a pipeline owned by Hess. Further follow-up is needed.

Notes:

Inspection Date: 9/ 18/2019

Arrived on location at 1745. The site is the same as the inspection on Monday. No further work has been completed. Further follow up with responsible party.

No photos were taken.

Updated Volumes and Contaminant None at the time of this update

Date: 9/19/2019 **Status:** Correspondence - More Follow-up Required **No Further Action:**

Author: DeVries, Taylor

Notes:

Spoke with Hess representative on the phone. Daylighting of the pipelines begins Friday. Excavation starting after that. Further follow up is needed.

Updated Volumes and Contaminant None at the time of this update

Date: 9/20/2019 **Status:** Inspection - More Follow-up Required **No Further Action:**

Author: DeVries, Taylor

Notes:

Inspection Date: 9/19/2019

Arrived on location at 0900. No photos were taken. A crew was out daylighting the pipelines. Further inspections are needed during reclamation.

Updated Volumes and Contaminant None at the time of this update

Date: 10/24/2019 **Status:** Inspection - More Follow-up Required **No Further Action:**

Author: O'Gorman, Brian

Notes:

Arrived on location at 12:40. Met with the company consultant who explained to me that the north walls were clean in the excavation. He also communicated that they had 8 pipelines running below the excavation, so they were still working on a plan for removal. The excavation was approximately 50' by 50' by 12' deep. Hydrocarbon stained soils were noted below the area where the pipe was repaired. Took photos. No on-site followup needed until the Department receives a report from the consultant. Photos added to the incident folder.

Updated Volumes and Contaminant None at the time of this update

Date: 11/12/2019 **Status:** Inspection - Vegetation Check **No Further Action:**

Author: DeVries, Taylor

Notes:

Inspection date: 11/12/2019

Arrived on location at 1320. The excavation has been backfilled entirely. Further follow up needed in summer 2020 to check vegetation.

Photos were taken and can be found in the report folder.

Updated Volumes and Contaminant None at the time of this update

Date: 8/6/2020 **Status:** Inspection - Vegetation Check **No Further Action:**

Author: DeVries, Taylor

Notes:

Inspection Date: 7/6/2020

Arrived on location at 1230. The location where the spill occurred is slowly starting to grow vegetation back. There are a variety of plants growing. Some tolerant and some intolerant species. Another site visit is recommended next summer.

Photos were taken and can be found in the incident folder.

Updated Volumes and Contaminant None at the time of this update

Date: 11/5/2020 **Status:** Inspection - Vegetation Check **No Further Action:**

Author: Gertis, Daniel

Notes:

Vegetation appears to have grown in affected area, but very dry.

Updated Volumes and Contaminant None at the time of this update

Date: 6/8/2021

Status: Inspection - No Action Required

No Further Action:

Author: Lund, Dylan

Notes:

Arrived on location at 1710 on 6-8-2021.

No sign of any remaining contamination or environmental concerns. Vegetation is healthy and has grown back in previously contaminated area. No follow-up is necessary. No photos taken.
