**Date of Inspection: mm/dd/yy**

**Release Detection System:** Inspect for the proper operation of your release detection system and indications of potential leaks in the underground storage tank system(s).

**Spill Buckets:** Ensure spill buckets are clean, in good condition, and empty of liquid and debris.

**Overfill Alarm:** Inspect for proper operation.

**Fill and Monitoring Ports:** Inspect all fill/monitoring ports and other access points to make sure that the covers and caps are secured and tightly sealed.

**Spill and Overfill Response Supplies:** Ensure you have available on site appropriate supplies for cleaning up spills or overfills; i.e., an absorbent such as cat litter or floor dry.

**Dispenser Hoses, Nozzles, and Breakaways:** Inspect for loose fittings, deterioration, improper functioning and signs of leakage. Call your tank contractor to repair obvious problems.

**Dispenser and Dispenser Sumps:** Open each dispenser and inspect all visible piping, fittings, and couplings for any signs of leakage. If any water or product is present, remove it and dispose of it properly. Investigate and report to the North Dakota Department of Environmental Quality reasons for the presence of product. Remove any debris from the sumps.

**Piping Sumps:** Inspect all visible piping, fittings, and couplings for any signs of leakage. If any water or product is present, remove it and dispose of it properly. Investigate and report to the North Dakota Department of Environmental Quality reasons for the presence of product. Remove any debris from the sumps.
As part of the 2005 Energy Policy Act, facilities that operate regulated underground storage tank (UST) systems are required to have their Class B operator perform or oversee the performance of a 30-day inspection of their UST system(s). These inspections are conducted to ensure essential equipment is operating properly. The North Dakota Department of Environmental Quality’s Underground Storage Tank Program has developed a “30-Day Walk-Through Inspection Checklist” in order to assist UST owners and operators with this requirement (see reverse).

Inspections are required on a 30-day basis and must be documented to be in compliance. **Initial** each box below the date of inspection to indicate that the device/system was inspected and found to be operating properly on that date. **A minimum of one year’s 30-day walk-through inspections must be kept on site.** If the 30-day inspection results indicate a potential leak in your underground storage tank system, the reason for the leak must be investigated and corrective action taken to address the source. In addition, if a release of product has occurred, it must be reported to the North Dakota Department of Environmental Quality’s Underground Storage Tank Program at (701) 328-5166.
