PROJECT LOCATION: Grant County, North Dakota

MAJOR GOAL: The Grant County Cannonball River/Dogtooth Creek Watershed Project is designed to provide technical, financial, and educational assistance to agricultural producers and landowners within the two watersheds. The goal of this project is to improve water quality to enhance the recreational activities available on the Cannonball River and restore riparian habitat by implementing Best Management Practices (BMPs).

PROJECT DESCRIPTION: The project sponsors intend to prioritize technical and financial assistance to lands that have the most impact on water quality, track water quality trends over the life of the project, develop educational programs to heighten public awareness of nonpoint source pollution concerns and solutions and develop working partnerships in the local community to benefit natural resources.

\$319 Funded Full Time Personnel 1

2.0 Statement of Need

2.1 The Cannonball River/Dogtooth Creek TMDL Implementation Project targets approximately 44 miles of the Cannonball River which is fully supporting, but threatened due to excessive E-coli concentrations (exceeding 11,000 cfu/mL). Winter feeding on the Cannonball River and its tributaries and season long grazing are the most likely sources of the bacteria affecting the Cannonball River although failing septic systems or direct discharge sewage systems could also be contributing to the excessive E-coli concentrations.

The Grant County Soil Conservation District has long recognized the natural, economic, and recreational value of the Cannonball River and its surrounding watersheds with maintenance of the river's water quality and improved soil land management a high priority. The District recently completed the Cannonball River Watershed Project and considers it a huge success installing over \$100,000 of Best Management Practices in the final year. The five year project, just upstream from this proposal, had practices installed that improved water quality on two of the three water sampling sites. The third site, on Highway 31, may see some improvement as many best management practices were installed in this area just last year. Water quality results for the Cannonball River Watershed Project are included in Appendix 1 indicating the water quality improvements made.

The district sees continued interest from producers in improving water quality on the Cannonball River. Word has circulated in the Cannonball River area that funding is available for water quality improvements and producers have seen what their neighbors or relatives have been able to accomplish through a watershed project. This proposal would continue the momentum of the past Cannonball Watershed project in improving water quality throughout all segments of the Cannonball River in Grant County.

2.2 The Cannonball River flows through five counties in southwest North Dakota, Originating in the northeast corner of Slope County, the Cannonball River winds its way in a southeasterly direction across Hettinger and Grant Counties where it confluences with Cedar Creek. At its confluence with Cedar Creek, the Cannonball River changes direction flowing northeast bisecting Sioux and Morton Counties and forming the northern border of the Standing Rock Indian Reservation. (See Appendix 2 for map) The North Dakota Department of Health has identified the Cannonball River as full supporting, but threatened for recreational use due to excessive E.coli bacteria concentrations.

This project will address water quality on stream segments ND-10030206-027-S-00 and ND-10130206-007-S_00 and their accompanying watersheds. These stream segments are physically located in or directly adjacent to Grant County. Since this project does cross county lines, the Grant County Soil Conservation District will work closely with the Cedar Soil Conservation District, using their district technician to initiate contact with producers in their district to ensure continuity in personnel. The technician will accompany the watershed coordinator with on site visits until a contract has been written assuring a seamless transition for the producer.

Most producers in Morton County affected by this project use the Grant County USDA office as their administrative office and have worked with personnel in the Grant County District, NRCS, and FSA offices. Any producer who is not affiliated with the Grant County office will have their plan reviewed by the Morton County Watershed Coordinator prior to funding.

Funding for this project will be controlled by Grant County Soil Conservation District.

2.3 The Cannonball River/Dogtooth Watershed Project is focusing on installing grazing type practices to improve water quality, targeting grazing land immediately adjacent to the Cannonball River or its tributaries. As indicated on the high priority crop and noncrop acres map in Appendix 2, noncrop acres (range and pastureland) make up a majority of the high priority areas.

Over 60 percent of the land in this proposal is either rangeland or grass land, therefore indicating that beef production is a high priority. Cropland fields, although prevalent, are small in acreage and on soils with a higher productivity index. With the rough terrain and fragile soils, proper land management is a necessity to prevent deterioration on all land uses.

Table # 1 Land Use Acreage by TMDL Sub-Watersheds.

Land Use Type	TMDL Sub-Watersheds				Total Acres	Total (%)
	ND-10130206-027-S_00		ND-10130206-007-S_00			
	Acres	Percent	Acres	Percent

No Data	120	0.1	453	0.2	573	0.1
Total	148,621	28.8	281,288	54.4	429,909	100

The Cannonball/DogTooth Proposal has three small communities embedded in the watershed; Shields, Raleigh and Porcupine. Shields and Raleigh have less than 20 people in their communities with each homeowner having a private water and sewer system. The town of Porcupine has approximately 146 people with a municipal water and sewer system in place.

Much of the land in this proposal is privately owned either by active producers or absentee landowners. In Sioux County, approximately 70 percent of the land is either tribal or allocated land with the remaining 30 percent privately owned. Almost all the land in this watershed is being actively farmed or ranched with very little set aside for wildlife either through the Conservation Reserve Program or by private individuals. This area is seeing a slow influx of younger producers looking to take over the family farm or working alongside the family and acquiring additional acreage to support their operation.

2.4 The Cannonball River/Dogtooth Watershed Project focuses on the eastern end of the Cannonball River as it flows through Grant County and aims to promote riparian restoration by removing livestock pressure from the river and riparian areas. Many of the producers in this area use the river and its tributaries as their main source of water for their livestock throughout the calendar year.

This area has a strong emphasis on livestock production with most of the producers having more than 100 but less than 300 head of cattle. Sub-watershed ND-10130206-027-S_00 has ten known Animal Feeding Operations (AFOs) of 100 to 1000 and sub-watershed ND-10130206-007-S_00 has six AFOs of 100 to 1000 that are located in the riparian area or in a location where pollution from livestock waste is likely (Espe, 2005). There may be other AFOs in the TMDL sub-watersheds, however their location and size are unknown.

Failing septic systems or direct discharge sewage systems could be located within the watershed. Single-family dwellings and farmsteads are located throughout the watershed and while it has not been documented, land application of septic sludge may be another source of contamination. The district has chosen not to address septic systems as prior project history has shown water quality improvement achieved through grazing type water quality practices.

Season long grazing is more the norm due to a lack of infrastructure for a rotational grazing system (mainly wells and cross fences). Any crop production in this watershed is basically for feed; oats or barley for hay and corn for silage. Most of the land in this watershed is marginal for crop but with the advent of no till, the region is seeing some fields of corn for grain and sunflowers.

Rainfall in this watershed is minimal and this area is prone to drought conditions even during wet cycles. The soils are siltstone, sandstone and shale which minimize crop production and leave rangelands of short grass prairie, forbs and a wide variety of forage ideal for beef production. Due to the fragility of the soil, proper rangeland management is needed but not necessarily what is occurring in this watershed.

Livestock producers generally maintain their herds outside of the headquarters except for calving season. Herds are wintered in riparian areas using the river for water and river hills for protection. Backgrounding of calves is minimal and there is very little interest by producers in a contained animal feeding system.

There are about 40 producers in Grant County that would be affected by this watershed project with an additional estimated 25 total producers in Morton and Sioux County. Education and

information will be necessary as many of these producers have been ranching and farming for years, engrained with their routines.

2.5 Water quality issues as documented by the North Dakota Department of Health.

Below is a chart indicating the water quality problems on the Cannonball River during the years 2001 through 2007. As you can see, E.coli far exceeds the standard of 126 CFU/100 mL.

Station Number	Location Description	Number of Samples Collected	Max. (CFU/100 mL)	Min. (CFU/100 mL)	Geometric Mean (CFU/100 mL)	Percent Greater than 409 CFU/100 mL	Percent Samples Exceeding the 126 CFU/100 mL Standard
		Years Collected					
385138	Cannonball River, 1 miles S. and 0.5 miles E. of Shields, ND	38	11,000*	10	124	21	33
		2001-2002					
380067	Cannonball River, 0.5 miles S. of Breien on Hwy 6 bridge	60	3,400*	10	261	36	53
		1994-2007					
		44	1,600*	10	229	30	56
		2001-2002					

* Some of the samples returned results of "too numerous to count," a value of 1600 was used in these situations.

In summary, the Cannonball River/DogTooth Watershed Proposal desires to provide information, education and funding to producers in the southeastern portion of Grant County, north west areas of Sioux County and a small portion of Morton County. This project's goal is to continue improving water quality on the Cannonball River by installing grazing practices along the Cannonball River and its tributaries. With the success of prior Cannonball River projects, the District hopes this proposal will continue the momentum to improve water quality on all segments of the Cannonball River in Grant County.

3.0 Project Description

3.1 Goal

The goal of this project is to reduce E.coli bacteria in the Cannonball River to achieve “fully supporting” status to enhance the recreational use on the Cannonball River.

Objective 1:

By the end of the project period, the quality of water from stations 385138 and 380067 on the Cannonball River will meet the North Dakota E. coli bacteria standard of a geometric mean of 126 CFU/100 ml with less than 10 percent of samples exceeding 409/CFU/100 ml.

Task 1

Employ personnel needed to provide technical and administrative assistance to producers in the watershed area.

Planned Product: Employ a part-time watershed coordinator, an individual to take water samples, and an administrative assistant. Additional assistance will be provided by the District Technician employed with the Cedar Soil Conservation District.

Cost: \$12,521.00 for the individual to take water samples.

Task 2

Provide assistance to producers to execute Best Management Practices (BMPs) that reduce E.coli loads in the watershed by improving grazing management. Priority will be giving to grazing practices that focus on improving the riparian areas of the Cannonball River and its tributaries.

Planned Product: Conservation planning on 5,000 acres in 2014, 7,500 acres in 2015, 15,000 acres in 2016, 17,500 acres in 2017 and 20,000 acres in 2018. Planning and practices will be a joint venture between watershed and NRCS at an estimated 75/25 split between the two entities.

Cost: \$182,175

Task 3

Install partial manure management systems throughout the watershed. Priority will be given to those AFOs that consistently use the Cannonball River as a winter feeding area. Practices may include wells, pipelines, insulated water tanks and/or windbreak panels.

Planned Product: 10 partial manure management systems.

Cost: \$61,500

Task 4

Promotion of cover crops to increase diversity in crop rotation and extend the grazing season with aftermath grazing, relieving pressure on range and pasture land.

Planned Product: Cover crop mixes planted on 100 acres of cropland in 2014, 100 acres in 2015, 150 acres in 2016, 200 acres in 2017 and 200 acres in 2016.

Cost: \$14,175

Task 5

Conduct follow-up contacts to assist with conservation plan updates and monitor operation and maintenance of Section 319 cost shared products during the watershed project.

Planned Product: Database of applied BMPs with yearly status reviews throughout the watershed project.

Cost: Cost included with Task 1

Task 6

Coordinate with the entities involved in the EQIP locally led work group process to maximize the amount of EQIP funding available to improve water quality. This will include both technical and financial assistance needed to implement current and future projects on the Cannonball River to address water quality issues.

Planned Product: Target EQIP funding to improve riparian areas through grazing practices and improved land management through this project and in future years.

Cost: Cost included with Task 1

Objective 2

Increase the producers' understanding of the impacts and solutions to improve water quality.

Task 7

Organize and conduct scheduled information and educational programs focusing on grazing and land management within agricultural areas and coordinate them with ongoing state/federal sponsored information and education programs. Examples would be range, cover crop, soil health, and Grazing Land Coalition tours.

Planned Product: Four workshops, four tours/demonstrations and five informational meetings conducted throughout the project period.

Cost: \$ 0 Cost will be incurred by district

Task 8

Prepare newsletter articles and direct mailings to local land users, general public and media to promote the project and disseminate information on improving water quality through better land management. Topics will include nutrient management, rotational grazing, benefits of cover crops, and other pertinent information on water quality.

Planned Product: Minimum of 15 newsletters and 10 direct mailings.

Cost: \$ 0 Cost will be incurred by district

Task 9

Promote watershed activities and water quality practices at district sponsored events. Targeted audience would be all encompassing to include agricultural producers, urban and country dwellers and school aged children. Examples are Eco-Ed, Grant County Ag Day, County Producer meetings.

Planned Product: Minimum of 10 events throughout the watershed project.

Cost: \$ 0 Cost will be incurred by district

3.2 See attached Milestone Table (Appendix 3)

3.3 All necessary permits will be acquired as needed. These may include Clean Water Act (CWA) Section 404 permits and cultural resource reviews through the State Historical Preservation office, when needed.

3.4 The Grant County Soil Conservation District (GCSCD) is the appropriate entity to coordinate and implement this project. The SCD is a locally elected volunteer conservation organization that serves all the people in the county. The GCSCD has legal authorization to employ personnel and receive and expend funds. The GCSCD has sponsored three other 319 projects.

3.5 The Grant County Soil Conservation District will be responsible for auditing Operations & Maintenance Agreements (O&M) on BMP's after completion of the project and yearly status reviews of EPA-319 contracts. The lifespan of each BMP will be listed in the individual contracts to ensure longevity of the practices. The producer signs the "EPA 319 Funding Agreement Provisions" form which explains in detail the consequences of destroying a BMP before the completion of its lifespan.

4.0 COORDINATION PLAN

4.1 This project is sponsored by the Grant County Soil Conservation District (GCSCD). Partners in the project will also include Natural Resources Conservation Service. The GCSCD will be the lead project sponsor.

Grant County Soil Conservation District – The lead project sponsor is the GCSCD. The ND State Health Department will hold a contracting agreement with the district to implement and complete the objective and tasks in this plan.

USDA Natural Resources Conservation Service (NRCS) – The NRCS will provide day to day assistance in conservation planning, plan writing, contract writing, and technical assistance for construction and installation of planned BMPs. NRCS personnel will conduct quality review and compliance checks of BMPs that are designed by NRCS personnel. Local NRCS personnel will provide approved BMP standards and specifications from the NRCS technical guide.

Environment Quality Incentive Program funds will also be available in limited amounts. NRCS will provide assistance by facilitating local involvement and participating in educational outreach programs during the project period. An annual review will be conducted with Field Office, DC, and the SCD to reconfirm and acknowledge NRCS's ability to commit to the project.

North Dakota Department of Health (NDDH) – The NDDH will oversee 319 funding as well as provide training for proper water quality sample collection, preservation, and transportation to ensure reliable data is obtained. The NDDH will provide the sponsor oversight to ensure proper management and expenditures of Section 319 funds. They will assist the Grant SCD personnel in review of O & M requirements for Section 319 funded BMP's.

North Dakota Cooperative Extension Service (EXT) – Fully supports this project and will complement project with education and informational activities which entails workshops and field tours. The specific role of EXT will be dependent on the type of information/education activity being implemented and availability of staff and materials.

Cedar Soil Conservation District – Full supports the project, technical assistance will be provided when necessary.

Grant County Commission – Fully supports the project and will be asked to provide assistance when necessary.

Grant County Water Resource Board (WRB) – Fully supports the project and will be asked to provide assistance when necessary.

North Dakota Game & Fish Department (NDG&F) – Fully supports the project and will be asked to provide assistance when necessary.

US Fish and Wildlife (USF&W) – Fully supports the project, programs and will be asked to provide assistance when necessary.

The Bureau of Reclamation- supports and fully endorses efforts to help conserve and protect our water resources.

4.2 Letters of support for this project are on file from adjoining Counties, Grant County Commissioners, Grant County Water Resource Board, ND Game & Fish, Bureau of Reclamation, and US Fish & Wildlife.

4.3 The Grant County Soil Conservation District will coordinate along with other 319 and non-319 funded NPS education programs, watershed projects, demonstration sites, and training programs being conducted by other organizations, which include the Department of Agriculture and ND Stockmen's Association.

4.4 The Cannonball River and Dogtooth Watershed Proposal focus is on best management practices that impact range and pasture lands. This proposal is unique to the area and is not duplicating any other project.

5.0 EVALUATION AND MONITORING PLAN

A Quality Assurance Project Plan (QAPP) will be developed by the North Dakota Health Department when this project is approved.

6.0 BUDGET

6.1 See Appendix 5.

7.0 PUBLIC INVOLVEMENT

7.1 Information and education meetings will be held to keep the community informed as needed. This may include community leaders, commissioners, water resource board members, city mayors, and district supervisors.

Grant County Cannonball and Dog Tooth Watershed Project Implementation Plan

Appendix List

1. Upper Cannonball River Water Sampling Results
2. Grant County Maps and Photos
3. Milestone Table
4. Letters of Support
5. TMDL
6. Budget Tables

Appendix 1

Upper Cannonball River Water Sampling Results

This information is from recently completed Cannonball River Watershed Project. The results indicate that water quality was improved on two of the three monitoring sites through grazing type water quality practices from 2007 through 2012.

[illegible]

Station 385137

Station 385137 is located four miles east and 13 miles south of Carson, ND and monitors the upstream 12 digit HUCs 101302040702 and 101302040703. In total, 133 E. coli bacteria samples were collected and analyzed from 2007 through 2012.

Analysis of E. coli bacteria data collected at site 385137 in 2007 through 2012 shows the site is fully supporting the recreational beneficial uses for all months except May, at which time the site had fully supporting, but threatened recreational uses. While all but one month is fully supporting recreational beneficial uses, data implies that E. coli bacteria concentrations still appear to be on a declining trend (Figure 6). The annual geometric mean has declined from 86 CFU/100 mL in 2007 to 65 CFU/100 mL in 2012. It should also be noted that the percent exceeding 409 CFU/100 mL has declined from 14% in 2007 to 4% in 2012.

E. coli Bacteria 30-day Geometric Mean, Percent Exceedance of 409 CFU and Support Status for Sampling Site 385137

Appendix 2

Grant County Maps And Photos

This map illustrates the Cannonball River/Dogtooth Creek watershed, highlighting specific monitoring sites and TMDL reaches. The watershed boundary is shown in light orange. The Cannonball River TMDL reaches are marked with a red line, and the Dogtooth Creek is marked with a blue line. Two monitoring sites are indicated by green dots: one at station 385138 on the Cannonball River and another at station 380067 near the confluence of the Cannonball and Dogtooth rivers. The map also shows major roads (21, 24, 31, 6) and various creeks (Snake, Gler, Flasher, Dogtooth, Cannonball, etc.).

- Monitoring Sites
- Cannonball River TMDL Reaches
- Dogtooth Creek

Milestone Table

Task	Output	Quantity	2014	2015	2016	2017	2018
Task 1 Employ personnel needed to provide technical and administrative assistance to producers in the watershed area.	Watershed Coordinator, Water Sampling Individual, Administrative Assistant, Cedar District Technician	4					
Task 2 Provide assistance to producers to execute BMPs that reduce sediment and nutrient loads on the approximately 400,000 acres of land in the watershed. This will be accomplished by installing such practices as fencing, tanks, and pipelines to implement a prescribed grazing system.	Conservation Planning	65,000 Acres	5,000 Acres	7,500 Acres	15,000 Acres	17,500 Acres	20,000 Acres
Task 3 Install partial manure management systems throughout the watershed. Priority will be given to those AFOs that consistently use the Cannonball River as a winter feeding area.	Partial Manure Management Systems	10					
Task 4 Promotion of cover crops to increase diversity in crop rotation and extend the grazing season with aftermath grazing, relieving pressure on range and pasture land.	Cover crops	750 acres	100 acres	100 acres	150 acres	200 acres	200 acres

<p><i>Task 5</i> Conduct follow-up contacts to assist with conservation plan updates and monitor operation and maintenance of Section 319 cost shared products during the watershed project.</p>	<p>Database of applied BMPs with yearly status reviews throughout the watershed project.</p>	1					
<p><i>Task 6</i> Coordinate with the entities involved in the EQIP locally led work group process to maximize the amount of EQIP funding available to improve water quality.</p>	<p>Expertise and financial resources to producers in the project area installing grazing practices through EQIP</p>	1					
<p><i>Task 7</i> Organize and conduct scheduled information and educational programs focusing on grazing and land management within agricultural areas and coordinate them with ongoing state/federal sponsored information and education programs.</p>	<p>workshops tours/demonstrations informational meetings</p>	13	<p>1 tour</p> <p>1 wrkshp</p> <p>1 inform meeting</p>	<p>1 wrkshp</p> <p>1 inform meeting</p>	<p>1 tour</p> <p>1 wrkshp</p> <p>1 inform meetings</p>	<p>1 wrkshp</p> <p>1 inform meeting</p>	<p>1 tour</p> <p>1 wrkshp</p> <p>1 inform meeting</p>
<p><i>Task 8</i> Prepare newsletter articles and direct mailings to local land users, general public and media to promote the project and disseminate information on improving water quality through better land management.</p>	<p>newsletters direct mailings</p>	25	<p>3 news articles</p> <p>2 direct mailings</p>	<p>3 news articles</p> <p>2 direct mailings</p>	<p>3 news articles</p> <p>2 direct mailings</p>	<p>3 news articles</p> <p>2 direct mailings</p>	<p>3 news articles</p> <p>2 direct mailings</p>

<p><i>Task 9</i> Promote watershed activities and water quality practices at district sponsored events. Targeted audience would be all encompassing to include agricultural producers, urban and country dwellers and school aged children.</p>	<p>District Sponsored Events</p>	<p>10</p>

August 19, 2013

Grant Co. Soil Conservation District – Board of Directors
PO Box 257
Carson, ND 58529

SUBJECT: Proposed Cannonball/Dogtooth Watershed Project Area – Support Letter

In theory, the department is supportive of funding non-point source pollution control measures through EPA-319 funding requested in 2013 by Grant & Sioux counties. The proposal includes an area encompassing a minimum of 12 PLOTS contracts totaling at least 8,000 acres of hunting access, not to mention potential for additional PLOTS program sign-ups.

Watering devices allow for managed grassland habitat increasing cover vigor and providing water quality benefits to both game and fisheries populations within and downstream of the project area. Grazing helps to reduce predominance of Kentucky bluegrass and smooth brome and benefits noxious weed control efforts by setting plant growth stage for control by other methods.

Sincerely,

A handwritten signature in black ink, appearing to read "Jon Roaldson". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Re: Cannonball Watershed Project

The Cedar Soil Conservation District would like to extend their support to the Grant County Soil Conservation District watershed project along the Cannonball River. The Cedar Soil Conservation District feels this is a positive and worthwhile project that will help to improve the water quality in that area. Cedar SCD looks forward to working with Grant County SCD on this watershed project.

Kelly Froelich
Cedar SCD Chairman

Grant County Water Resource District

PO Box 161, Elgin, ND 58533

July 15, 2013

Landowners and producers in the Cannonball and Dog Tooth Watersheds:

The Grant County Water Resource board supports the Grant County Soil Conservation in its investigation of pursuing sites along the Cannonball and Dog Tooth Watersheds to improve the water quality by moving cattle off the river/streams with pipelines and tanks and alternative watering systems, improve grazing systems with cross fences and converting marginal crop land to hay land or pasture.

In the past, success has been seen with this type of water management during major water runoff events.

The board supports the continued effort in managing major water runoff events. If you have any questions, please contact Harold Gaugler at (701) 376-5348 or email at hgaugler@sdplains.com.

Sincerely

Jerald Christensen
Chairman

Subject: Letter of Support for a Segment of the Cannonball River Implementation Project

Dear Directors:

The letter is in response to and support of your proposed Cannonball River Implementation Project.

The Bureau of Reclamation supports the objectives of the Cannonball River Implementation Project sponsored by the Grant County Soil Conservation District, although we have no authority or funding to assist your effort. We fully endorse efforts such as this watershed project to help conserve and protect our water resources in North Dakota and to provide producers with viable economically, environmentally, and socially accepted resource solutions.

Sincerely,

Darrin Goetzfried
Supervisory Civil Engineer
Facilities and Engineering Division
